First Businesses Enter Beautify El Paso Contest; Others Being Directly Contacted

The Hickory House, 1239 McRae, and El Paso Teachers Credit Union, 6610 Continental, are the first two El Paso businesses to enter the "Beautify With Cacti" campaign-contest being cosponsored by Beautify El Paso Association and The El Paso Times.

A spokesman for the association said both businesses plan to use Southwestern type landscaping of cacti and native vegetation, or plant material which does particularly well in the Southwestern desert. The plant material will be combined with gravel and boulders.

Paul Stern, manager of Teachers Credit Union detailed the landscaping plan for his building. Junipers, pines, coyote bush, caton-easter and Arizona Ash will be combined with several large boulders.

Mrs. Charles V. Christensen, committee member of the Beautify El Paso Association, contacted both businesses and signed them for the contest.

Several other committee members are also making calls in their assigned City areas following up on letters to approximately 200 businesses.

Any business in El Paso desiring to clean up and landscape is eligible to enter the contest, which will run through June 30. Prizes of \$40, \$30, and \$20 will be awarded to first, second, and third place winners. It is necessary for the businessman to supply a "before" and "after" photograph showing the degree of property improvement to give the judges a basis for awarding the prizes.

Committee members assisting with the campaign include Mrs. Christensen, Mrs. Harold R. Shelton, Mr. and Mrs. Andy Cohen, Mr. and Mrs. Frank J. Mangan, Miss Peggy Mangan, Charlie Topper, Mrs. Joe Batte, Mrs. John Jago, Mrs. M. G. McKinney, Mrs. Chester

Chope, Miss Frances Clayton, Miss Kathy Kistenmacher and Miss Julie Kistenmacher.

The Beautify El Paso Association suggests that if dirt areas are not readily available, businesses can make use of large clay flower pots and plant them with small cacti or succulent plants, greasewood, Texas sage, orange gazanias, and santolina.

For large dirt areas and parkways, other type of plants available in the Southwestern desert which are suitable for landscaping include ocotillo, agave or century plant, barrel cactus, cholla, sotol and yuccas.

Care should be taken digging the narrow leafed yucca, which has a tap root that extends several feet into the ground. The broad-leaved yucca is relatively easier to transplant.

After the desert plants are dug, they should be "cured" for several days in a shady place to heal any resulting scars.

Large rocks in various sizes and colors, and gravel may be used in conjunction with the desert plantings.
